

## SIGNRACER NEWS 02-2016

### SIGNRACER UV ink Amethyst SR-150 without NVC

SIGNRACER has developed a new NVC (N-Vinyl Caprolactam) free ink. NVC free inks are less toxic for human beings. The new Amethyst SR-150 is one of the first products in the market without NVC. Therefore we have created an NVC free logo, which is also shown on the ink bottles. The new ink has less odour, is fast drying and has outstanding Acetone resistance. At the same time the ink has good adhesion and flexibility.

Between **8<sup>th</sup>** and **11<sup>th</sup>** of March 2016 SIGNRACER will present the new Amethyst SR-150 during the open house in 4004 JP Tiel (Morsestraat 11a), Netherlands (*only 1 hour from FESPA Amsterdam*) on the following printers:

- **Signracer 2500 H-LED** hybrid high speed printing on banner and temperature sensitive material and new Amethyst SR-150 NVC (N-Vinyl Caprolactam) free inks for fast drying
- **Signracer 3116 LED** flatbed with new Amethyst SR-150 NVC (N-Vinyl Caprolactam) free inks for fast drying and Acetone resistance

Please **register** by Email on [info@signracer.ch](mailto:info@signracer.ch)

Rooms are organized at local Hotels in Tiel. Please inform us, if you need reservations.
