

SIGNRACER NEWS 01-2018

SIGNRACER presents UV and water based printers at FESPA Berlin. Visit us in hall 1.1 at stand A56

For UV applications, Signracer will exhibit a flatbed Signracer 1610 HD (High Definition) and a hybrid Signracer 2500. The Signracer 1610 HD is equipped with the Ricoh Gen. 5s print head, which has one of the smallest drop sizes in the industry with 2.5 pl. This new MH5220 print head is a benchmark product in the industry and enables the SIGNRACER HD series to print the finest graphics and highest quality in the market. SIGNRACER is the first company that launched the Ricoh MH5220 last year in Europe.

On the Signracer 2500 the newest UV ink SR-100 HD will be presented. This ink has an outstanding outdoor robustness and a very good solvent and scratch resistance. It is developed for flexible and rigid materials.

Signracer will also exhibit the new Hydrospeed+ with an innovative water based pigment ink for outdoor applications. The first Hydrospeed was introduced at Viscom Italy in September 2017 with a maximum speed of 130 m²/h. At Fespa SIGNRACER will present the new Hydrospeed+ with linear motor for highest speeds of 320 m²/h.

The new water based inks Signracer WBP are able to print on several materials like blue back papers, textiles and wallpapers. The ink forms a special surface film for highest water and scratch resistance. The ink has no smell and is therefore ideal for indoor applications as well. The high pigment loading results in vibrant colours for every design purpose.
