SIGNRACER HD series with new Ricoh MH5220 print heads (2.5 pl) presented at Fespa Hamburg

SIGNRACER has developed a new printer series called SIGNRACER HD (High Definition), which will be presented at Fespa Hamburg on a SIGNRACER 2512 HD flatbed printer. SIGNRACER is already using the Ricoh MH5420 print head with 7 pl drop size since 2014 in the standard models. This technology will be presented at Fespa on a SIGNRACER 3200 hybrid printer.

Based on the close partnership with Ricoh SIGNRACER became a development partner for the new Ricoh MH5220 print head with only 2.5 pl drop size. The new MH5220 is a benchmark product in the industry and enables the new SIGNRACER HD series to print the finest graphics and highest quality in the market. SIGNRACER is the first company launching the Ricoh MH5220 in Europe.

After a first presentation of the new print head technology at the SIGNRACER Open House in March 2016, the first sales of the HD technology was started in October 2016. The new SIGNRACER HD series is already a large success with 5 installations in Europe.

Another new development presented at Fespa is the increased performance of the adjustable LED system. The new system increases the performance from 9.5 to 14 Watt/cm² which is almost a 50% increase in curing power.
