

SIGNRACER NEWS 02-2014

SIGNRACER signed OEM agreement with Ricoh

SIGNRACER GmbH, which was founded in June 2014, has signed an OEM agreement with Ricoh in December 2014. The print heads from Ricoh are very robust and especially developed for high end industrial printing, which is a major market for the SIGNRACER printers. Especially the new Ricoh Gen. 5 print head, used on the new SIGNRACERS, is a big step forward in print quality and printing speed.

With the support of Ricoh Europe SIGNRACER GmbH is able to optimize the print head performance with special wave forms, temperatures and voltages. This was already done for the first new SIGNRACER OEM ink with excellent results. The new Amethyst SR-100 inks were tested and officially released by Ricoh. Together with the optimized print head control Amethyst SR-100 offers the highest reliability on the SIGNRACER printer series.

The Amethyst SR-100 inks are developed for flexible and rigid materials and have good adhesion on materials like Acrylic, Polycarbonate, Aluminium and other rigid materials. For transparent materials the white offers a very high opacity.
