

SIGNRACER NEWS 05-2019

Together with our industrial partner Bergstein, SIGNRACER exhibits at INPRINT 2019 in Munich. Visit us at stand 620 (12.-14.of November)

Signracer has modified with Bergstein our small flatbed UV printer to print on industrial components with up to 25 cm height. The new Signracer 1610 HB can move the whole bridge with the print head carriage to higher positions. The height is adjusted via a touch screen and printing quality in 25 cm height is the same than on standard printers with 5 or 10 cm height.

Therefore, this concept is already sold to several companies in Italy to print on shoes. However, any other components with up to 25 cm can be printed like furniture, wood, boxes parts etc.
